

Typography Guidance

For your future landing pages, give your AI agent a clear type system instead of letting it “pick something nice.” Use this as the default guideline.

Default Brand Direction

For Empire Design-style pages:

- Primary font: Inter Tight
- Tone: modern, clean, architectural, professional
- Avoid: serif luxury fonts, gold/cream palettes, overly decorative typography
- Use: charcoal text, deep green accents, white/light-gray space
- Good pair:
 - Headings: Inter Tight, 700
 - Body: Inter Tight, 400
 - Labels/buttons: Inter Tight, 600

```
:root {  
  --font-main: "Inter Tight", system-ui, sans-serif;  
  
  --text-main: #1C1C1D;  
  --text-body: #505050;  
  --text-muted: #B3B3B3;  
  --accent: #005850;  
  
  --h1-size: 4.75rem;  
  --h2-size: 3.5rem;  
  --h3-size: 1.5rem;  
  --body-size: 1rem;  
  --small-size: 0.875rem;  
}
```

Core Rules For The AI Agent

1. Use no more than one or two font families.

For clean service-business landing pages, one strong family is usually better than a display/body pair.

2. Do not use generic typography unless intentionally matching a brand.

Avoid default-looking Arial, Roboto, plain Inter, or system-only styling when the page needs a premium feel.

3. Headings should be bold, direct, and readable.

Use 600-800 weight for headings then hero headings.

4. Do not use negative letter spacing.

Keep letter-spacing: 0 for normal text. Use slight positive tracking only for small uppercase

```
labels6. Body1 {  
  font-size: 4.75rem;  
  line-height: 1.05;  
  font-weight: 700;  
  letter-spacing: 0;  
  color: var(--text-main);  
}
```

```
h2 {  
  font-size: 3.5rem;  
  line-height: 1.12;  
  font-weight: 700;  
  letter-spacing: 0;  
}
```

```
h3 {  
  font-size: 1.5rem;  
  line-height: 1.25;  
  font-weight: 600;  
}
```

```
p {  
  font-size: 1rem;  
  line-height: 1.7;  
  font-weight: 400;  
}
```

```
.eyebrow,  
.button,  
.nav-link {  
  font-size: 0.75rem;  
  font-weight: 600;  
  text-transform: uppercase;  
  letter-spacing: 0.04em;  
}
```

****Responsive Guidance****

Use breakpoint-specific sizes instead of letting type scale freely with viewport width.

```
```css
@media (max-width: 768px) {
 h1 { font-size: 2.75rem; }
 h2 { font-size: 2.25rem; }
 h3 { font-size: 1.25rem; }
 p { font-size: 1rem; }
}
```

Prompt For Your AI Agent

Use a disciplined landing-page typography system.

For Empire Design or architectural/service-business pages, use Inter Tight as the only font family. Use bold, modern headings with weight

700, body text at weight 400, and uppercase labels/buttons at weight 600.

Use a charcoal, gray, white, and deep green visual system:

- Main text: #1C1C1D
- Body text: #505050
- Muted text: #B3B3B3
- Accent: #005850
- Surfaces: #FFFFFF and #F9FAFB

Do not use serif fonts, gold accents, cream backgrounds, negative letter spacing, or generic oversized marketing typography. Keep hero text

large and confident, section headings smaller than hero text, and body text readable with generous line height. Ensure all text fits on mobile and never overlaps other UI or media.
